FOR NOTES

[illegible]

1. GENERAL INFORMATION

Purpose and content of this document. This document contains a general description of the equipment, information on installation, intended use, maintenance, current repair and manufacturer's warranty.

Distribution of this document for product modifications. The manufacturer can make changes to the design of the product, aimed at improving its characteristics, changing the design, etc. This document may not contain a description of such changes, but applies to such modified products.

2. MAIN TECHNICAL DATA AND CHARACTERISTICS

Length, mm	13067
Width, mm	12066
Height, mm	5369
Weight, kg	3372
Free height of fall, mm	2029
Age restrictions, years	from 7 to 12
Weight limits, kg	Up to 60

3. COMPLETENESS AND CHARACTERISTICS OF THE MAIN PARTS OF THE PRODUCT

In order to simplify the assembly and documentation, the manufacturer has reserved the right to divide this playground into seven parts for convenience. Each part consists partly of modules and partly of assembly units.

A module is an assembly unit presented together with the fasteners necessary for installation in the playground.

An assembly unit is an assembled construction that is shipped in this form by the manufacturer. The fastening elements of the assembly unit are presented in the specifications for the parts of the game complex. The appendix below (pic. 1) shows an approximate dividing of this product. The appearance of the complex, specifications, and the required geometric dimensions are also presented in the Appendix below.

4. PROCEDURE FOR ASSEMBLING AND INSTALLING THE PRODUCT

Tools and accessories. The product does not include the tools required for assembly and installation.

Product assembly and installation procedure.

Product assembly scheme is shown in pic.1-38.

- 1) Mark the area as indicated on the layout of the playground foundations (see pic.31).
- 2) Dig the holes for the racks installation, maintaining the geometric dimensions. Level the depth of the excavations by deepening them or adding gravel.
- 3) Assemble and install the towers: first assemble the beams with the supports, and then install the platforms into the grooves of the beams. Similarly, assemble all the towers for different heights. Assemble and install double tower in a similar way - with two platforms at different heights.
- 4) Connect the towers with each other by means of radial bridges with railings, straight bridges, wooden ladders.
- 5) Install roofs according to the general view of the complex.
- 6) Install slides and other play elements to the towers.
- 7) The main components of the game complex, the necessary geometric dimensions for the assembly process of the complex, general views are shown in the pictures 1-18.
- 8) Install the product according to the level marks on it in accordance with the concreting scheme (pic.40-41). During installation of the product on sandy soil, the overall dimensions of the foundation should be increased by 15-20%.

5. PRODUCT INSTALLATION SCHEME

Safety zone of the installed product must comply with pic.42 .

6. PRODUCT USE

Do not use the product until it has been fully and completely installed.

The product should not be used by users of a different age category.

Do not use the product by users of a different weight category.

Before using the product, clear the safety area from unnecessary objects that may cause harm to the user (debris, tools left after assembly and installation, etc.).

Do not use the product in adverse weather conditions (ice, snow, rain, hail, strong winds, etc.), which may cause injury to the user.

7. PRODUCT MAINTENANCE

You have purchased high-quality and reliable equipment. In the process of its production, the requirements of regulatory and technical documents of Ukraine, the CIS countries and the European Union regulating the production of children's gaming equipment were taken into account. However, it should not be forgotten that when operating any

technical product, certain rules and requirements must be followed. Despite the fact that our product is of high quality and reliability, this rule applies to it in full. You should be aware that the implementation of the following rules and recommendations for product maintenance is aimed at ensuring that your child, the child of your friends or acquaintances is safe and no unforeseen factors threaten his health, life.

Remember that the operation of the product is accompanied by the influence of various negative factors on it, a complete list of which cannot be predicted. Among them, an important place is occupied by natural factors and factors caused by human influence on equipment. As a rule, their action initially leads to disruptions in the appearance of the product. Thus, under the influence of factors caused by the exploitation of a person, there may be damage to the integrity of the paint coating of parts made of wood, in the form of scuffs, chips, incisions, and when exposed to parts made of metal, damage to the paint coating in the form of nicks, chips, abrasion, etc. This leads to the emergence and development of defects that can be the cause of the destruction of the product. The product is particularly dangerous if it is used for other than its intended purpose, if the permissible loads are exceeded, or if vandalism occurs, as these factors can cause irreversible changes in the structure of the material from which the product is made, leading to destruction.

The maintenance of the product implies, first of all, the responsibility of the user to comply with all recommendations provided in this document, starting with a daily inspection of the external condition of the product before operation.

Daily inspection of the product is a very important procedure. With its help, you can timely detect any changes in the appearance of the product (deformation of individual parts, deformation of the structure as a whole or part of it, damage to parts, cracks of welds, as well as the absence of fastening of parts of the product, etc.).

Before using the product, check its operability, absence of damage, dirt on the product, sharp edges, reliability of fixing the structure, absence of unnecessary objects on the surface of the site. If the product is damaged, fully or partially inoperable, or has any other defects, do not use it.

During operation it is also necessary to inspect the condition of the product periodically - the current inspection. It includes an external inspection of the product, checking its operability (in the presence of moving elements - the smoothness of the movement of mechanisms, compliance with operating modes, etc.). Current inspection allows you to detect malfunctions caused by the operation of equipment, climatic conditions, acts of vandalism and other factors, until they reach a critical level and the destruction of the product. The current inspection is carried out in order to detect foreign objects that may threaten the user and lead to violations of the functioning of the product. The frequency of the current inspection is set by the owner taking into account the operating conditions. If you do not have sufficient technical knowledge and skills to conduct such inspections, we recommend you to contact the authorized specialists of the manufacturer in order to obtain advice.

Every three months, a scheduled inspection should be carried out, which primarily concerns the foundation part, load-bearing elements and connection nodes of elements (their integrity and degree of deterioration).

The main annual inspection must be carried out annually by authorised specialists of the manufacturer. During the inspection, the technical condition of the equipment shall be assessed for compliance with safety requirements. The degree of deterioration and damage to wooden elements and their ability to withstand the applied loads, damage, corrosion of metal elements and the impact of these factors on the safety of the product are determined. The inspection also helps to identify the impact of repairs, if any, on the safety of the equipment.

Based on the results of the inspection, a maintenance procedure is carried out to eliminate the identified discrepancies in the product's operation. This procedure includes assessing the condition of parts and assemblies, replacing worn parts, and restoring the integrity of protective coatings. The results of the inspections, as well as the procedures carried out as a result of the inspection and maintenance of the product must be properly documented in the Registration Journal, which is an integral part of this passport. The owner of the product must keep the acts of maintenance of the product, acts of repair work.

8. INFORMATION ON STORAGE, TRANSPORT AND DISPOSAL

The product is transported in the manufacturer's packaging by any means of transport that ensures its safety and protection from external factors (rain, snow, sunlight, water, high humidity, etc.).

Information about transportation

Date		Brand, state number of the ca/trailer	Position, full name	Signature
Departure	Arrival			

Before installation, store the product in the original packaging in dry, closed rooms with natural air ventilation.

If it is necessary to transport the product to another location after use, it is recommended to use the manufacturer's packaging.

If long-term storage of the product is required, the following storage rules must be observed (the list of conditions is not complete):

- place the product in a closed dry room with natural ventilation;
- protect the product from external factors (dust, water drops, etc.) with a large plastic bag, leaving space for free air circulation;
- take other measures to preserve the appearance and characteristics of the product during storage.

When removing the product from storage and preparing for installation, follow the next recommendations:

- remove the product from the packaging material (polyethylene, cardboard, other packaging materials);
- remove dust and other contaminants from the surface of the product;
- check completeness and absence of parts damages.

Storage information

Date		Product storage conditions	Full name	Signature
Putting into storage	Removal from storage			

After the end of the equipment's service life, the buyer independently determines the procedure for its use. If you decide to recycle, contact the seller or specialized organizations.

The equipment does not contain harmful impurities and materials that can harm your health and is not subject to special recycling.

Appendix

11	Washer 10 GOST11371		12

Picture 23 – Completeness and assembly scheme of the tower with two sites (on the height – 2m and 0,7m) beam 3,5m. Marked as №6 in the picture 40, part 5,7 GC.

<i>Pos.</i>	<i>Name</i>	<i>Weight, kg</i>	<i>Q-ty</i>
<i>1</i>	<i>Beam support</i>	<i>2</i>	<i>4</i>
<i>2</i>	<i>Site</i>	<i>19</i>	<i>1</i>
<i>3</i>	<i>Beam</i>	<i>20</i>	<i>4</i>
<i>4</i>	<i>Cap M8</i>		<i>8</i>
<i>5</i>	<i>Cup M8</i>		<i>8</i>
<i>6</i>	<i>Bolt M8x120 GOST7802</i>		<i>4</i>
<i>7</i>	<i>Bolt M8x130 GOST7802</i>		<i>4</i>
<i>8</i>	<i>Nut M8 GOST5915</i>		<i>8</i>
<i>9</i>	<i>Washer 10 GOST6958</i>		<i>4</i>
<i>10</i>	<i>Washer 10 GOST11371</i>		<i>8</i>

Picture 24 – Completeness and assembly scheme of the tower 1,5m. Marked as №4 in the picture 40, part 3 GC.

Pos.	Name	Weight, kg	Q-ty	Note
1	Connector		1	Red
2	Roof rim	5	4	Red
3	Slope (T922)	12	4	Grey
4	Adapter	2	4	Red
5	Upper lap	8	2	White
6	Slope	4	4	Red
7	Plate (angle 67 degrees)		8	Brown
8	Plate		8	Brown
9	Angle 45x45x40 (90 degrees)		16	Brown
10	Plate		8	Brown
11	Plate		8	Brown
12	Angle bar (1.5m)	3	4	Brown
13	Cap M8		144	Yellow
14	Cup M8		144	Yellow
15	Bolt M8x35 GOST7802		20	
16	Bolt M8x30 GOST7802		100	
17	Nut M8 GOST5915		120	
18	Washer 10 GOST11371		144	
19	Screw 6x20 GOST1145		4	
20	Screw 8x70 GOST11473		24	

Fastening elements are not shown in the drawing - with help of pos. 13, 14, 16, 17, 18.

Picture 25 – Roof assembly scheme

Pos.	Name	Weight, kg	Q-ty	Note
1	Pyramid roof slope	5	4	Blue
2	Support plate		4	Blue
3	Plate		8	Blue
4	Cap M8		32	Yellow
5	Cup M8		32	Yellow
6	Bolt M8x30 GOST7802		24	
7	Nut M8 GOST5915		24	
8	Washer 10 GOST11371		32	
9	Screw 8x50 GOST11473		8	

**Picture 17 – Pyramid roof assembly scheme. Roof colour (blue/grey).
Blue is installed in part GC №3 'Workshop'**

Pos.	Name	Weight, kg	Q-ty
1	Inclined stairs 700	13	1
2	Cap M8		2
3	Cup M8		2
4	Washer 10 GOST11371		2
5	Screw 8x50 GOST11473		2

Picture 26 – Assembly scheme for inclined stairs

<i>Pos.</i>	<i>Name</i>	<i>Weight, kg</i>	<i>Q-ty</i>
1	Rope ladder	6	1
2	Bracket		2
3	Tube 27x2 L=390mm GOST10704		2
4	Tube d12x1.5 GOST10704, L=22mm		2
5	Cap M8		8
6	Cup M8		8
7	Bolt M8x45 GOST7798		2
8	Washer 10 GOST11371		8
9	Nut M8 GOST5915		2
10	Screw 8x50 GOST11473		4

Picture 38 – Assembly scheme of rope ladder

For beams supports and other elements

for the slides of the complex

For spiral descent

A - shock-absorbing coating;

B – soil;

B – concrete;

Г - depth of the shock absorbing coating;

Д - product level plane;

Е – game surface.

Examples of impact-absorbing coatings

Material ¹	Description	Minimal depth, mm	Free height of fall, mm
Turf			≤1000
Tree bark	grain size 20-80 mm	200	≤2000
		300	≤3000
Sawdust	grain size 5-30 mm	200	≤2000
		300	≤3000
Sand ²	grain size 0,2-2 mm	200	≤2000
		300	≤3000
Gravel ²	grain size 2-8 mm	200	≤2000
		300	≤3000
Other materials ³	Characteristics of the tested material		Critical free height of fall, obtained during testing
1. Materials specially prepared for playgrounds. 2. There should not be any clay inclusions. 3. The grain size is obtained by sieving through a sieve as in EN933-1.
